

The all new Way2Go! Heavy Vehicle map application

Way2Go! will service a wide range of heavy vehicle access / permit needs and will be able to:

- Display gazetted & pre-approved networks from a single source of truth.
- Deliver road manager self-service to update routes efficiently in response to industry.
- Provide instant alert features during times of natural disasters and emergencies.
- Push routes (maps) to industry systems via in-cab or mobile devices.
- Provide intelligent routing to optimise industry using the most suitable routes.
- Deliver a single source of authoritative national transport network spatial data - the Heavy Vehicle Enforceable Network (HVEN).

Way2Go! Architecture

Way2Go! and OpenStreetMap (OSM) Comparison

OSM is the base layer **Way2Go!** is built upon; what other differences are there between the two?

OpenStreetMap	Way2Go!
Base Map like Google Maps. Shows roads, buildings & features like cafe, layby, truck stop	Authenticated to Road Managers, Jurisdiction teams and Transport Operators
9 million local contributors	Based and built using the great maps of OSM
Free to use, update and share	Road Managers administer roads directly!
Up-to-date and dynamic	1 consistent map for multiple jurisdictions
Trustworthy & robust data sets	Workflow to allow NHVR Access, State & council road managers to work on cases together
Road data is rich showing direction of travel, road surface, speed limits etc.	Interactive map showing networks, routes and giving the right people ability to update!
Instant Change Ability – add road names & intersections, speed limits, road surface etc	Heavy vehicle focussed – approve networks on own turf.
